Bioplus-Probois is the Belgian association of the biocides industry - producers, manufacturers and distributors of biocides for the Belgian market for both industrial, professional and non-professional uses. Since 1959 we represent the biocides industry towards public authorities, organisations (research, media...) and the whole society on regional and national level. We are part of European biocide discussions, in close cooperation with the European Biocidal Product Forum (EBPF). We engage in collaborative spirit with authorities, stakeholders and other actors related to our industry.

Practical benefits

- We organise technical meetings with our member companies several times a year, to discuss market authorisation issues and to disseminate the latest regulatory news on the Belgian biocide legislation and the Biocides Product Regulation (BPR 528/2012).
- 4 times a year we have constructive meetings with the Belgian competent authority FPS Health - Biocides service.
- We provide country association support and start active discussions in the European Biocidal Product Forum which is part of the European Federation of the Chemical Industry Cefic. The president of Bioplus-Probois is member of the EBPF management committee.
- We collaborate with the Belgian chemical federation essenscia on the general product standard policy, and with the Belgian association of soaps, cosmetics and detergents Detic.
- We represent our members in the Raw Material Fund, where Belgian biocide fees and retributions are discussed and in the advisory committee of the Belgian Food Security Agency.
- We offer helpdesk support to our members.

Bioplus-Probois has a separate working group that concentrates on wood protection products (PT 8). In the framework of providing technical attestations, this group cooperates closely with the Belgian association for wood protection products ABPB-BVHB.

President

Mr. Raf Leyman

Vice-presidents
